

CSS Grid

A real grid track-sizing and placement engine — no browser engine involved.

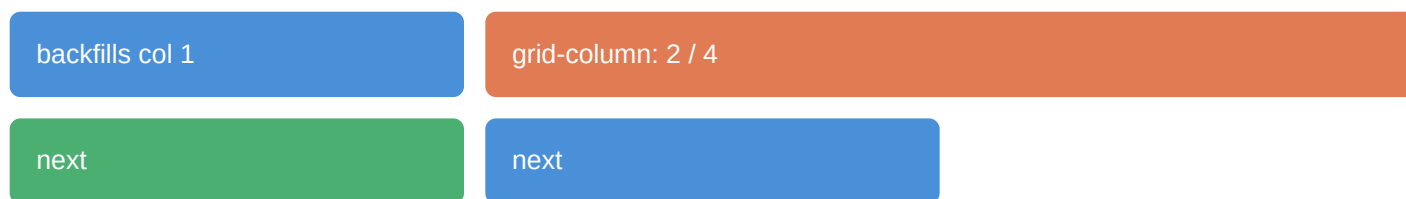

Fixed + flexible tracks — `grid-template-columns: 120pt 1fr 1fr`

Spanning — `grid-column: span 2 / grid-row: span 2`

Dense auto-placement — a 1-wide item backfills the hole before the wide item

Responsive cards — `repeat(auto-fill, minmax(150pt, 1fr))`
