

CSS Nesting

Each card is styled entirely by **nested rules**: `& .title`, an implicit-descendant `.body`, a compound `&.accent`, a child `> .tag`, and a two-level-deep `& + .tag` — the shape modern utility frameworks emit for browser targets.

Plain card

Title, body, and pill tags all come from selectors nested under `.card`.

alpha

beta

Accent card

This one adds the `.accent` class, so `&.accent` tints it blue.
