

Document-tree pseudo-classes

Nothing on this page is selected by a class or an id alone. The colours come from a `:scope` token block, the links from `:any-link`, and every highlight in the table below from `:empty` - three selectors that need only the document tree.

:empty marks the gaps

PART	SUPPLIER	LEAD TIME
Hinge, 40mm	Ferrant & Co.	3 weeks
Bracket, L	<i>not supplied</i>	2 weeks
Spacer, 6mm	Ferrant & Co.	<i>not supplied</i>

Row 2's supplier cell is written `<td></td>` and row 3's lead time holds three spaces. Both are `:empty` - white space is not content. A cell holding a non-breaking space would not be, and neither would one holding a `<br>`.

:empty collapses an unused container

This callout has content, so it stays.

The template emitted an empty callout between these two. `.callout:empty { display: none }` removed it, so no stray blue rule prints.

:any-link, and what it leaves alone

A [real hyperlink](#) is styled by `:any-link`; a named anchor with no href is not a link source, so it keeps the plain body treatment this page's `a { }` reset gives every anchor.
