# Face matching order

A family's faces are narrowed by `font-stretch` first, then `font-style`, then `font-weight`. Among faces that declare oblique ranges, the requested angle chooses; `font-weight` takes fractions.

## A condensed upright face and an italic face of normal width

condensed italic: the condensed face, lean faked

normal italic: the italic face

condensed: the condensed face

normal: only the italic face has the width

## Two oblique ranges: 0deg 5deg and 10deg 15deg

oblique 3deg: the first range, 3deg

oblique 8deg: below 11deg the range below is searched first, 5deg

oblique 12deg: the second range, 12deg

oblique 25deg: the second range, 15deg

## Fractional weights: 350.2 350.8 and 100 300

350.5 is in the first range, drawn at 350.5

350 is in neither: the nearest below, drawn at 300

350.9 is just above the first range: drawn at its upper end, 350.8
