

overflow-wrap

Emergency wrapping only breaks an otherwise-unbreakable token. The normal opportunity before the long lake name wins first; once the word is alone on a line, it can split at a grapheme boundary without adding a hyphen.

normal Lake Chargoggagoggmanchauggagoggch is in Massachusetts.	anywhere Lake Chargoggagoggmanchaug gagoggchaubunagungama ugg is in Massachusetts.	break-word Lake Chargoggagoggmanchauggag oggchaubunagungamaugg is in Massachusetts.	word-wrap alias Lake Chargoggagoggmanchauggag oggchaubunagungamaugg is in Massachusetts.
--	---	--	---

Min-content sizing

anywhere contributes its grapheme opportunities to min-content; break-word deliberately keeps the whole word as its min-content width.

any wher e: Char gogg agog gma ncha ugga gogg chau buna gung ama ugg	break-word: Chargoggagoggmanchauggagoggchaubunagungamaugg
