

SVG: display

display: none

The red square carries `display: none` (here from a class rule) and so does the red circle's group. Only the blue squares paint; a hidden element renders nothing, and nothing under it does either.

display: contents

Left: a group with `transform`, `opacity` and a fill. Right: the same group with `display: contents`, which has no box, so it is neither moved nor faded; the green fill it passes down by inheritance still reaches the square.

Text content children

A `tspan` with `display: none` leaves the text; a `tspan` with `display: contents` keeps its characters, in their own fill, without its own position.
