

CSS Text 4 tab-size Test Page

Default (tab-size: 8, initial value)

Each tab indents to the next multiple of 8 space widths

```
function greet(name) {  
    if (name) {  
        console.log("Hello, " + name);  
    } else {  
        console.log("Hello!");  
    }  
}
```

tab-size: 4

A narrower numeric tab stop - same source, tighter indentation

```
function greet(name) {  
    if (name) {  
        console.log("Hello, " + name);  
    } else {  
        console.log("Hello!");  
    }  
}
```

tab-size: 2

An even narrower numeric tab stop

```
function greet(name) {  
    if (name) {  
        console.log("Hello, " + name);  
    } else {  
        console.log("Hello!");  
    }  
}
```

tab-size: 40px (a <length>, not a multiplier)

An explicit length fixes the stop width regardless of the font's own space width

```
function greet(name) {  
    if (name) {  
        console.log("Hello, " + name);  
    } else {  
        console.log("Hello!");  
    }  
}
```
