

Tagged PDF (PDF/UA) Showcase

This document exercises PeachPDF's optional tagged-PDF output (`PdfGenerateConfig.EnableTaggedPdf`): headings, a paragraph, lists, a table, an image with alt text, a link, HTML5 sectioning elements, and both an explicit `-peachpdf-pdf-tag-type` override and a none suppression.

Lists

- First item
 - Second item
1. Step one
 2. Step two

Table

Name	Role
Ada Lovelace	Mathematician
Alan Turing	Computer Scientist

Image and link

[PeachPDF on GitHub](#) - the underlying Link annotation is cross-referenced with its `/Link` structure element in both directions (`/OBJR` and `/StructParent`).

-peachpdf-pdf-tag-type overrides

`This <div>` is promoted to `/BlockQuote` via an explicit `-peachpdf-pdf-tag-type` override.

This paragraph's wrapper `<div>` is tagged none, so it is invisible in the structure tree - the `<p>` below attaches directly to the nearest tagged ancestor instead.

A real `<blockquote>`, tagged `/BlockQuote` by the default stylesheet (no override needed).
