

CSS Text 3 text-align: justify & text-align-last

A forced break ends a paragraph: every `<br>` line stays ragged

Peach State Technologies
1 Example Parkway, Suite 400
Atlanta, Georgia 30303
United States of America

Default: only the lines that end a paragraph are ragged

Lorem ipsum dolor sit amet, consectetur
adipiscing elit, sed do eiusmod tempor
incididunt ut labore et dolore magna aliqua.
Ut enim ad minim veniam, quis nostrud
exercitation ullamco laboris nisi ut aliquip ex ea
commodo consequat.

text-align-last: justify (the exemption declined - every line fills the measure)

Lorem ipsum dolor sit amet, consectetur
adipiscing elit, sed do eiusmod tempor
incididunt ut labore et dolore magna aliqua.
Ut enim ad minim veniam, quis nostrud
exercitation ullamco laboris.

text-align-last: center

Lorem ipsum dolor sit amet, consectetur
adipiscing elit, sed do eiusmod tempor
incididunt ut labore et dolore magna aliqua.
Ut enim ad minim veniam, quis nostrud
exercitation.

text-align-last: right

Lorem ipsum dolor sit amet, consectetur
adipiscing elit, sed do eiusmod tempor
incididunt ut labore et dolore magna aliqua.
Ut enim ad minim veniam, quis nostrud
exercitation.

direction: rtl - the default text-align-last: auto is *start*, which is the right edge

Lorem ipsum dolor sit amet, consectetur
adipiscing elit, sed do eiusmod tempor
incididunt ut labore et dolore magna aliqua. Ut
.enim ad minim veniam

text-align is a real shorthand over text-align-all/text-align-last (issue #1027)

Plain text-align: justify (default text-align-last:
auto) - the closing line stays ragged.
Second sentence to give this paragraph a
forced break.

text-align: justify-all sets text-align-all AND
text-align-last to justify - even the closing line
stretches to the full measure.
Second sentence, same treatment.

text-align: match-parent resolves against the **parent's own direction (issue #1027)**

This RTL container's own child paragraphs declare `text-align: match-parent` with no direction of their own

Match-parent's *start* resolves against the container's RTL direction, so both paragraphs pack against the physical right edge - the same result

an explicit `text-align: right` would give here, but automatically
following whichever direction the container ends up with
