

CSS text-transform Test Page

1 — Core Keywords

Hello World	HELLO WORLD	hello world	Hello World
none (baseline) text-transform: none	uppercase text-transform: uppercase	lowercase text-transform: lowercase	capitalize text-transform: capitalize

2 — Capitalize: Word-Boundary Edge Cases

Capitalize only uppercases the first letter of each whitespace-delimited word - a hyphenated compound stays one word, not three separately-capitalized fragments.

Editor-in-chief	HELLO WORLD	'Twas The Night	One Two Three
hyphenated compound text-transform: capitalize	already mixed case text-transform: capitalize	leading punctuation text-transform: capitalize	multiple spaces text-transform: capitalize

3 — Inheritance

text-transform is an inherited property - a child inline element picks it up from its parent unless it sets its own value.

PARENT CHILD INHERITS	PARENT child overrides	parent Child Override	no transform plain child
child inherits parent's uppercase div { text-transform: uppercase } span (no override)	child overrides to none span { text-transform: none }	child overrides to capitalize div { text-transform: lowercase } span { text-transform: capitalize }	baseline, no transform anywhere (none set)

4 — Combined With Other Text Properties

IMPORTANT NOTICE	Quarterly Report	<u>CLICK HERE</u>	• First Item • Second Item
uppercase + bold text-transform: uppercase; font-weight: bold	capitalize + centered text-transform: capitalize; text-align: center	uppercase + underline text-transform: uppercase; text-decoration: underline	capitalize list marker text ul { text-transform: capitalize }

5 — Long-Form Paragraph (Layout Correctness)

Confirms word-wrapping and width measurement operate on the transformed text, not the original - the paragraph below wraps the same as untransformed text of equal length would.

THE QUICK BROWN FOX JUMPS OVER THE LAZY DOG NEAR THE RIVERBANK AT DAWN.	The Quick Brown Fox Jumps Over The Lazy Dog Near The Riverbank At Dawn.
uppercase paragraph, narrow column text-transform: uppercase; width: 140px	capitalize paragraph, narrow column text-transform: capitalize; width: 140px
