

## Recognized-but-unmatchable selectors

Every colour, font and measure on this page is declared in a rule whose selector list also names something PeachPDF has no elements for. Registering those names keeps the list **valid**, so the half that does match still applies — and the unmatchable half still selects nothing.

### :root, :host

The design tokens driving this card come from a `:root, :host` block — the shape a utility framework emits. Its `:root` half applies; `:host` matches nothing.

tokens var()

### ::placeholder and friends

This card's accent comes from a list shared with `::-webkit-file-upload-button` and `::-moz-focus-inner`; its panel style from one shared with `::placeholder`, and its pills from one shared with `:host(.theme)`.

::placeholder :host()
